The ideas in this article will be part of a lecture to be given on January 18, 2014 in Phoenix Arizona on "The Alien Disclosure Plan."

Why do UFOs have lights?

Comment: Our aircraft have navigation lights on them. Every plane has the same arrangement. It is illegal to fly without them. The plane does not need the lights to power or direct the craft. The lights are there for safety – so people can see them. They signal a plane's position, heading, and status.

So why do UFOs have lights on them?

Comment: If we don't need lights to power or steer our aircraft it is safe to assume that the lights have nothing to do with the propulsion of UFOs. This is especially true when one considers that the lights on the various crafts have many different arrangements – some make it look like a giant Ferris wheel – some have small lights all over the craft.

Are there alien abduction?

Comment: Except for a very small numbers of researchers most would concede that people are being picked up.

When the aliens abduct people are there witnesses who see the craft doing it?

Comment: I know of only three cases and that is if you include the Travis Walton case. The general theory is that they can cloak themselves or shut down the area where the abduction is taking place. (People commonly report that they cannot wake their spouse during the event. It is

like the person is turned off. People abducted on roads also commonly report that for some strange reason there was a long period of time when there were no cars on either side of the road, even when it is a busy highway.

So why do UFOs have their lights on, and why are they seen during the day if they cloak themselves during abductions?

Comment: They want to be seen. When they perform abductions they don't want to be seen. From 1947 to 1952 there were many UFO sightings, but NO CONTACT. The contactees did not appear till a few days after the detonation of the hydrogen bomb (an important milestone in history as for the first time with hydrogen bombs mankind had the power to destroy the world.) The first abductee did not come forward till 1961.

From 1947 till 1952 they just wanted to be seen. It was the first step in the plan to make people aware they were not alone in the Universe. If they didn't want to be seen they would have turned off their lights. They can do that. There are many nighttime sightings where there are no lights. People report the object as it is blocking out the stars behind it giving the object away. Daylight discs don't have lights on them.

When UFOs appeared inside the nuclear weapons storage areas at Loring AFB, WurtsmithAFB, Minot AFB, and Malmstrom in 1975, or when a number of objects appeared at Rendlesham in 1980 why did they not cloak themselves?

Comment: They wanted to be seen. They were making a point. They are making us aware. Consciousness is awareness. Therefore they were making us more aware and raising consciousness. They could have cloaked themselves but didn't.

Why do certain people see UFOs and others don't?

Comment: They want the person to see. They want the person to tell others. The more people talk the more the awareness increases. The more the awareness increases the more consciousness raises. This raises a great question.

Why do UFOs Have Lights? : Questions and Comments

Why did Jimmy Carter see a UFO? Why was the object lite up?

Comment: Was it a random event – wrong place or wrong time? Or was it a trigger to Carter who they knew would be President. Consider that Carter authorized two classified studies by the Congressional Research Office, sent his science advisor to NASA to try and open up a new UFO study, sent his Press Secretary to the FBI which suddenly started collecting news clipping, assigned his friend Stansfield Turner to the CIA where lawyers were seriously combing for documents related to a UFO FOIA that had been filed, green-lighted a study on extraterrestrial intelligence at the Stanford Research Institute. Most importantly consider that over half of all the UFO documents filed under the Freedom of Information Act where released in the 4 short years of the Carter administration.

1977 was also the year of the first UK crop circle. It was the year of the release of Star Wars and Close Encounters of the Third Kind.

Why did Ronald Reagan see Two UFOs that kept their lights on?

Comment: They knew Reagan would be president (in fact there is a story that Reagan interacted with an alien that told him to run for President). Reagan would initiate a second UFO documentary in 1983 which fell apart, he made major moves to control nuclear weapons, made many comments about aliens that really raised consciousness on a worldwide scale, and green-lighted a documentary called “UFO Cover-Up Live” that leaded a lot of information into the UFO community.

Are the objects real?

They don't have to be. It might be easier to project a screen image which we know they can do then fly a craft around so someone can see it. Many sighting are not of objects flying around doing things. They are just objects sitting there. This indicates some sort of abduction screen image of just a screen image. Consider three;

1.

A girl, Connie, along with her mother father and neighbor view a metallic object like a pyramid with the top cut off up close in broad daylight. It is so close she pleads with her father to invite them in for coffee and pie. After a number of minutes her father tells her to go back to the farm house. The next thing she remembers it is night and she and her parents are sitting at the dinner table.

2.

Jimmy Carter and at least 10 witnesses watch an object that just sits there for 10 minutes, The only movement from the object is the object moving in very close than backing away. The object is not going anywhere or doing anything.

3.

Bud Hopkins and two other witnesses in 1964 see a daylight UFO that like the first two stories just sits there. It is close enough to see it is a metallic disc. It does nothing but sit there.

Why do UFOs have lights on them?

Comment: Appears to be some sort of gradual awareness program that has been going on for many years, and the type of UFO reported has changed as time went on.

It may even have started in the 1890s when objects like huge balloon air ships were seen all across America. Then 80 years ago foo-fighter objects (looking like little balls of fire) were seen around WW2 aircraft. These sightings stopped and have not been reported since.

Next came the green fireballs in the SW United States. The US military investigated and openly admitted this was a real phenomenon. Those type of green UFOs stopped and have not been seen since.

Disc shaped objects replaced the foo-fighters and green fireballs and that pattern continued for years. In the last few decades triangles sightings have increased compared to discs. These triangles could be accounted for by military secret aircraft, but not all, as I already saw a triangle up very close north of the American border in 1976.
